### **REASONS FOR ALLOWANCE**

The instant invention is deemed to be directed to an unobvious improvement over the invention patented in U. S. Patent Nos. 5,153,976 to Benchaar et al. and 3,589,756 to Pruvot. The improvement comprises a mounting mechanism with a through groove formed at an end surface of the cylinder main body to have such a shape as to pass the coupling end in an inserting state where the longitudinal axes of the cylinder main body and the push rod are held substantially normal to each other and to prevent the coupling end from coming out in a mounting state where the longitudinal axes of the cylinder main body and the push rod are substantially aligned for the purposes of simplifying the mounting process.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### **PRIOR ART**

The patents to Benchaar et al. and Pruvot are cited for the showing of mounting mechanisms similar to applicant's but lacking a through groove that facilitates mounting with the coupling end held normal to the longitudinal axes of the cylinder.

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consists of four patents.

Prosch et al. (5,794,512), Nakamura (4,528,895), Faris (3,852,982), and Batchelder (3,237,977) are cited to show mounting mechanisms.
